# *SLX and SLX Spectrum: a new industry benchmark*

*As the industry benchmark, Thermo King's SL range for trailer refrigeration offered exceptional performance and reliability as well as a wealth of cost-saving benefits. Retaining the best from the SL range and keeping your precise needs in mind, Thermo King's new SLX and SLX Spectrum take it one step further.*

*The SLX range delivers reduced fuel costs, whisper-quiet operation, efficient load protection and unmatched ease of use. By minimising fuel consumption, engine emissions and operating noise, the SLX provides you with the ideal temperature control solution for an environmentally-responsible operation.*

SLX Spectrum

## Driving down costs

In today's competitive transport business, keeping fuel and service costs low is high on everyone's priority list. The SLX provides you with a cost-effective partner for the road.

Fuel can represent over 50% of the total life cycle cost of a refrigeration unit. To minimise your costs, the SLX range provides you with unrivalled fuel savings.

As all components can be easily accessed, maintenance and service are straightforward.

### Low energy consumption

Belt-driven refrigeration systems are proven to be the most energy efficient. The SLX optimises this technology to enable the most effective energy conversion yet achieved. Tested under conditions which closely represent a typical daily cycle (pre-cooling a trailer and running on a mix of high and low engine speeds), the SLX showed savings of up to 20% when compared with the industry-leading SL. Compared with its predecessor, the SLX Spectrum uses 30% less fuel in a typical two-temperature duty cycle. Improvements of this magnitude will have a significant and measurable impact on your fuel costs.

### Reduced maintenance

The innovative configuration of the SLX provides fast and easy access for service and maintenance operations. By reducing engine speeds, the SLX offers a more benign operating environment to further extend component life expectancy. Where new components have been introduced, they have been exhaustively tested in the most demanding conditions.

### Maximum equipment utilisation, minimising downtime

You rely on your temperature control system to perform efficiently day in, day out. To maximise equipment utilisation, downtime must be minimised. Automated pre-trip checks and continuous monitoring of critical components on the road reduce the risk of unscheduled interventions while safeguarding your load. With the SLX's state-of-the-art Smart Reefer 2 (SR-2) control system, those benefits together with absolute peace of mind are at your fingertips.

### Highest residual value

An important consideration in the life cycle cost of capital equipment is its residual value. The SL range has proven to command the highest resale prices in the market. The improved performance and lower cost of operation of the SLX will ensure even better residuals.

# Thinking Green

## Minimising environmental impact

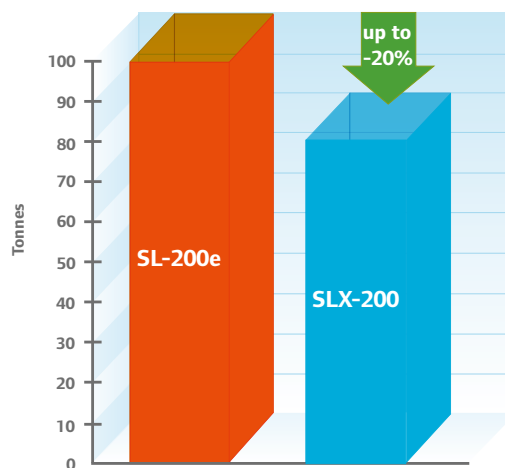

From the start of the SLX development project, a key deliverable was reduction of environmental impact. The design team conducted a life cycle assessment of the SL range to identify areas where the greatest gains could be achieved without compromising cost of ownership or performance. The result is a product range with a substantially reduced environmental footprint.

### Reduction of CO<sub>2</sub> emissions

Every litre of diesel fuel burned contributes 2.7 kg of CO<sub>2</sub>. Hence, efficient use of fuel means reduced CO<sub>2</sub>. Over an average life of 7 years, the SLX can reduce CO<sub>2</sub> emissions by up to 20% (over 17 tonnes).

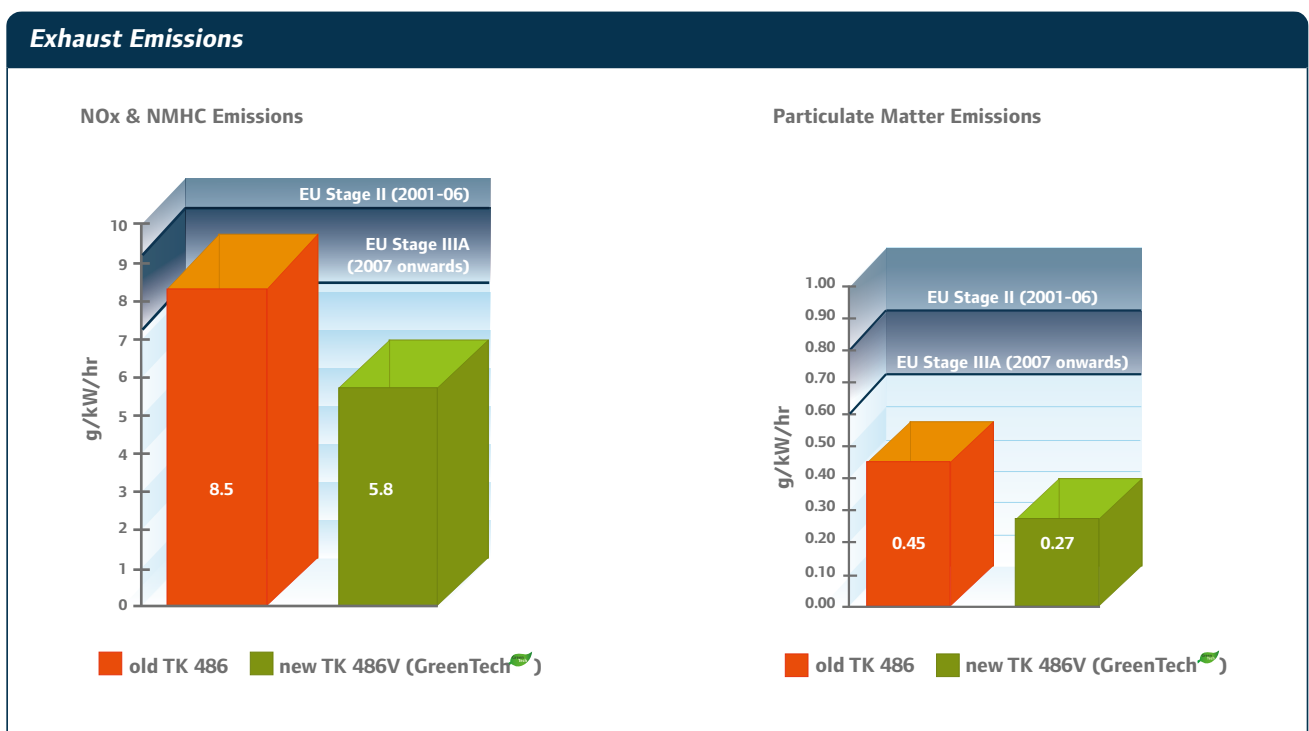

CO<sub>2</sub> Emissions over 7 years

## Reduction of exhaust emissions

For refrigeration equipment, emissions of particulate matter, non-methane hydrocarbons and nitrogen oxides (PM, NMHC and NOx) are regulated by EU Stage IIIA (Directive 97/68/EC). The GreenTech<sup>™</sup> engine in the SLX range has reduced exhaust emissions to a point substantially below this requirement.

The GreenTech<sup>™</sup> symbol is your guarantee that the SLX range features the TK 486V environmentally-friendly engine.

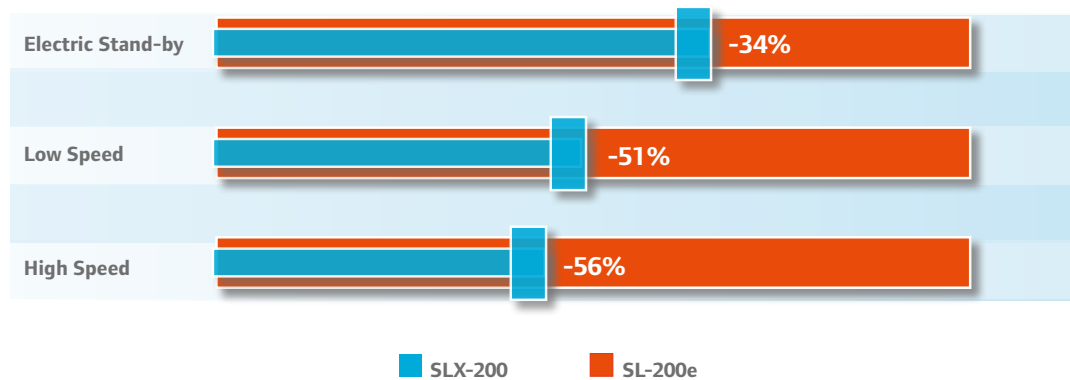

## Whisper-quiet operation

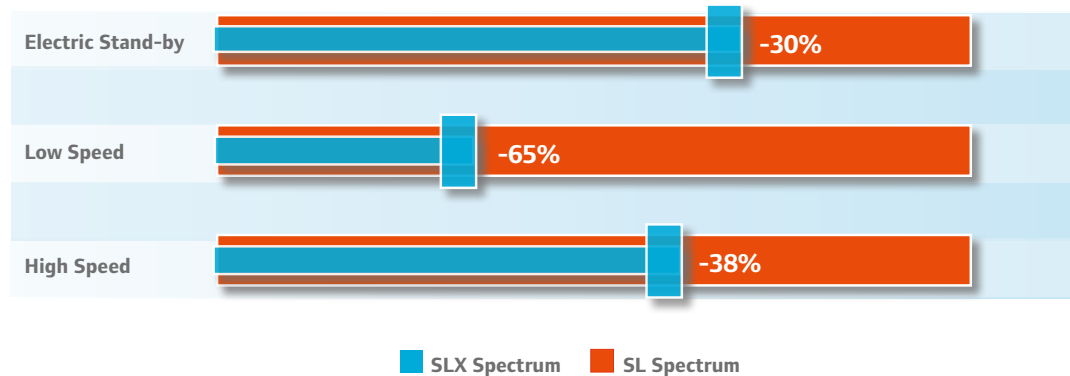

Noise can both be contained and reduced at the source. With the SLX you benefit from both approaches. Thanks to the integration of low-noise components running at lower speeds, sound levels are reduced significantly. The result is a whisper-quiet unit, increasing driver comfort and permitting operation in noise-sensitive environments. Nowhere is low noise more important than for delivery operations in densely populated areas. As delivered, and without the addition of "sound kits", the SLX Spectrum is substantially quieter than its predecessor.

### Reduction in Sound Levels

#### Single temperature sound pressure

#### Multi temperature sound pressure

## Reducing environmental impact and cost

The SLX has performance features which minimise both life cycle cost and environmental impact.

- 3000 hour maintenance interval: minimises oil, filter and coolant waste.
- Cycle-Sentry: stops engine when refrigeration is not needed, saving fuel and reducing emissions.
- Diesel/electric option: allows low-noise, zero-emission operation overnight or in restricted areas.
- Biofuel compatibility: the GreenTech™ engine is approved for use with B5 fuels, with no change in maintenance schedule.
- R-404A refrigerant:
  - Zero ozone depletion potential (ODP)
  - Zero chlorofluorocarbons (CFC)
  - Zero hydrochlorofluorocarbons (HCFC)
  - Zero chlorine

## Manufactured with respect for the world around us

The SLX range is manufactured by Thermo King's state-of-the-art facility in Galway, Ireland. This plant has held ISO 14001 for Environmental Management since 2000. Regular audits performed by the Environmental Protection Agency confirm a continuing reduction of direct environmental impact.

## Minimising waste

Material selection for the SLX includes recyclability as a priority. The SLX is 99.7% recyclable by weight.

## Materials selected with care

The materials and processes used to build the SLX must meet stringent environmental requirements, while retaining their ability to satisfy the most demanding operating conditions.

- 1 Gelyo\* ASA resin upper panels:**
  - Colour saturated: no painting, no solvent release
  - 100% recyclable
- 2 Water-based varnish to protect copper tubing**
  - Avoids all solvents
  - 20% fewer soldered service joints, reduced leak potential
- 3 Galvanised steel lower doors:**
  - 100% recyclable
  - Powder painted: less than 2% loss, no solvent release
- 4 Packaging:**
  - Returnable, recyclable shipping crates
  - Major vendors use returnable packaging

## Total load protection

Top-quality product delivery, increased shelf life, reduced load times... these are only a few of the essentials your business depends on. The SLX delivers maximum cooling capacity when you need it: during temperature pull-down for rapid pre-cooling and during temperature recovery after door openings.

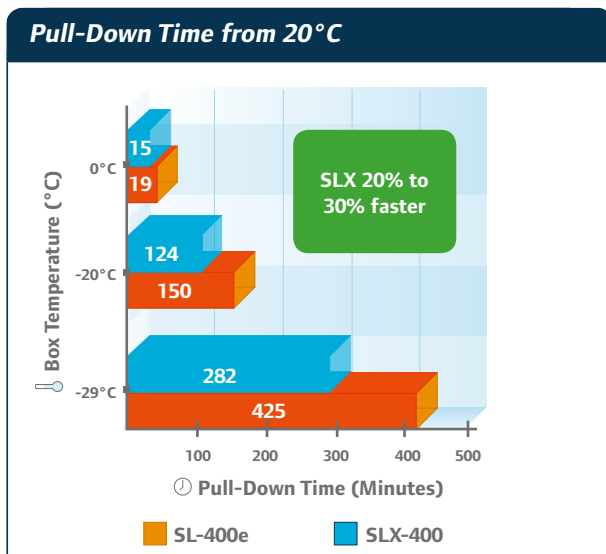

With the SLX range, you get the power you need, when you need it, to ensure protection of the most delicate and valuable cargo.

### Faster recovery and pull-down

The ability to recover set point quickly after door openings is critical to ensure top product quality. As soon as set point is reached, the system switches back to low-speed mode, saving fuel. Although SLX rated capacities at 0°C and -20°C are similar to the SL, the improved system design of the SLX delivers additional capacity at positive box temperatures. This results in faster pull-down. Faster pull-down means faster pre-cooling and reduced cycle times.

### Uniform temperature distribution

To protect the load, temperature variance throughout the trailer must be kept to a minimum. To help the system move more air through the load, the SLX features a larger evaporator air intake and a more efficient evaporator blower.

Small variations in temperature can significantly affect the shelf life of sensitive produce. For example, a difference of 1°C can reduce the shelf life of lettuce by over a day.

Grapes deteriorate more in ten minutes at 35°C than in 16 hours at 20°C.

## SLX Spectrum: Thinking Green for city distribution

The low-noise, low-emission SLX Spectrum is ideally suited to operating in an urban environment. Compartments or lanes, two zones or three, we have a system that will meet your requirements. Our dealers are trained to help you choose the right equipment for your particular application.

Our two- and three-blower remote evaporators can be combined to provide the optimum solution in a large number of different trailer configurations. With the SLX Spectrum, you can now drive up to nine remote evaporator blowers, giving you more flexibility to meet more demanding applications.

Advanced control logic (SmartSet™) protects sensitive cargo by providing tighter temperature control and minimising dehydration.

2 temperature zones

3 temperature zones

## The SR-2 controller. Optimise your SLX the easy way.

Driven by growing concerns over product quality, governments and customers worldwide are demanding tighter control and more accurate monitoring of temperatures throughout the cold chain. Raw cooling capacity is only one factor determining the performance of a temperature control system. The industry's most advanced controller is also the simplest to use. Now, multi-temperature trailer operators can view and control all compartments on one screen, with one set of controls.

### Smart Reefer 2 (SR-2) with integrated CargoWatch™ data logger: user-friendly control as standard.

The Smart Reefer 2 (SR-2) controller protects loads by simplifying the user interface and employing the latest technology to monitor system performance. It is the most user-friendly control system in the industry, with an easy-to-read display, large buttons, simple and logical menus and a choice of 21 languages.

### Optimal data monitoring, data management and compliance.

The SR-2 also integrates CargoWatch™, a high-performance data logger enabling full EU compliance. Since January 2006, data logging has been a European requirement for the transport of quick-frozen food (Regulation 37/2005).

Responding to this need, the SLX is the first range of temperature control units to feature on-board data logging as standard. To ensure your total compliance, CargoWatch™ is a fully approved independent logger.

### SR-2 features:

#### CargoWatch™ Data Acquisition System

This high-performance data recorder system records temperatures, set point, operating modes and external events.

- Output to computer or printer.
- Operates independently of unit controller.
- Memory storage for more than one year's data.
- Total quality control reassurance.
- Evidence of correct practice.
- Approved to EN-12830, CE Mark and IP-65 standards.
- Up to six independent sensors.
- Automatic power-up and shut-off to protect unit battery.

#### Load protection

- Mode lock prevents accidental selection of the wrong temperature band.
- Auto phase correction avoids reverse fan rotation on electric stand-by.
- Diesel/electric auto-switching ensures your cargo is protected even if the electricity supply is interrupted.
- Set point confirmation alerts the user that a change in set point must be confirmed.

#### ServiceWatch

A dedicated maintenance logger is another standard SR-2 feature. By tracking system performance and logging operational parameters, it can dramatically improve the speed and accuracy of service diagnostics.

Single temperature SR-2 display

Multi temperature SR-2 display

- Easy to read
- High reliability
- Advanced security
- Easy to use
- Speaks your language
- Easy to diagnose
- Built to last

## OptiSet™ Plus for single-temperature SLX

Because every cargo has very specific requirements, your SLX has many control settings which can provide optimised conditions for each of the cargoes you carry.

OptiSet Plus now allows you to achieve the best balance between cargo protection and fuel efficiency.

Your Thermo King Dealer can advise on the optimum settings for each cargo you carry and load these profiles into OptiSet Plus. Your driver simply selects a cargo or a set point and OptiSet Plus does the rest.

You can:

- Use a library of over 500 commodity profiles
- Determine the optimum conditions for your specific cargoes
- Achieve maximum fuel economy including Cycle-Sentry Modulation, Economy mode, Defrost interval management
- Provide optimum load protection using FreshSet™ to prevent top freezing
- Use Temperature Modulation to protect fresh produce
- Use High Speed Pull-down for tight temperature control, High Speed Modulation for high ambient temperatures, Freeze Protection for discharge air control, Diesel-electric Auto-switching to protect against loss of 3-phase power and Low fuel warning to avoid unnecessary service call-outs
- Install up to 64 profiles on your SLX
- Minimise the risk of operator errors such as wrong set point or wrong operating mode

# The inside story: a new benchmark in reliability

The challenge in developing the SLX range was to reduce downtime and maximise equipment utilisation. This has been achieved by a process of evolution: retaining the best features of the SL while applying innovative design and material solutions to further raise standards of reliability.

Individual components are now even more rugged and their operating environment more benign. Our most rigorous test programme ever has included years of nonstop endurance runs. Customer field trials were held in the most adverse conditions, from Pole to Pole. These have amounted to the equivalent of over 11 million kilometres.

The SLX comes with a full 24 month factory warranty.

Acoustically treated **muffler** reduces exhaust noise while horizontal orientation eliminates need for rain-cap and risk of water ingress.

Geloy\* ASA resin upper **panels**: impact-resistant, colour-saturated to hide scratches.

New anti-corrosion **alternator** design, protected from the elements by its location.

**Electronic throttling valve** and **3-way valve** relocated to easy-access location.

**Electric stand-by motor** for diesel/electric operation, relocated above engine for protection from the elements and improved service access.

New generation X430 C5 **compressor** with extended life crankshaft **bearings** and cast iron oil pump.

Finland: field test at -40°C

Dubai: field test at +55°C and dust conditions

North Sea: field test in corrosive environment

Prague: extensive lab testing

Aerofoil damper blade to minimise swirl and improve blower efficiency. Direct drive **damper motor** to eliminate linkages and improve reliability. Unrestricted evaporator airflow path for reduced power consumption.

Engine **coolant system** has double capacity to increase maintenance intervals.

Paired, high-efficiency **blowers** providing uniform airflow through condenser for maximum use of available capacity. Lower blower discharges air downwards to ventilate engine compartment. One-piece bracket ensures precise pulley alignment. Auto-tensioners and poly-v belts deliver exceptional belt life.

**Condenser coil** has 80% larger face area, enabling faster pull-down, superior high-ambient capability and increased cooling capacity.

GreenTech  low-emission **diesel engine**, running at slower speeds to extend component life as well as reducing noise, fuel consumption and CO<sub>2</sub> levels.

Galvanised steel **lower doors**: corrosion-proof, impact-resistant.

Carbon steel, immersion-painted **frame**, robotically welded for extreme dimensional accuracy.

# Performance, key features & options

With the SLX range we provide a broad portfolio of models to meet your specific needs. Whether you work in a long haulage transport environment, urban distribution, in extremely high or low ambient temperatures, on road or rail, Thermo King provides a model suited to your application. And a range of options to customise that model to your specific requirements. All SLX models can be used for transport of fresh AND frozen products.

Performance	SLX-100	SLX-200	SLX-300	SLX-400	SLX SPECTRUM
Refrigeration Capacity 0°C (W)	10000	13400	15000	17400	15400
Refrigeration Capacity -20°C (W)	5900	7800	8100	9300	8600
Airflow (m³/h / 0 Pa static pressure)	4250	5000	5000	5500	5000
Pull-down +20°C to -20°C (min)	238	190	182	124	N/A
Maximum trailer length (m)	12	14	14	16	15

# Features & options

## 1 Warranty coverage

2 full years' complete warranty cover on unit and options.

## 2 Extended Maintenance Interval: EMI 3000

- 3000 hours / 24 months oil change intervals
- Reduced clean-up and disposal cost
- Limited environmental impact with less spillage and less waste
- Extended engine life with improved, highly-efficient filtration
- Reduced cost of scheduled maintenance

## 3 High-performance battery

Designed exclusively for transport applications. Incorporates silver-calcium technologies to extend service life over 20% longer than conventional batteries

## 4 CargoWatch™ datalogger

High-performance data recorder system records temperatures, set point, operating modes and external events.

## 5 ServiceWatch maintenance logger

- History logging from cargo load till unload
- Programmable maintenance intervals
- Valuable diagnostic tool

## 6 TracKing

Thermo King's TracKing, a remote temperature and vehicle management tool, allows you to monitor your refrigerated cargo whenever you want, wherever you want.

Access to real time temperature and position data

- Optimum cargo management
- Enhanced fleet management
- Increased productivity
- Reduced security risk
- Greater customer satisfaction

## 7 Wintrac

User-friendly software offers fleet managers automatic and customised reporting of temperature and operational data logged by CargoWatch™ or transmitted by TracKing.

## 8 Produce Protection Plus

Provides the ideal conditions for fresh produce: extremely precise temperature control and a continuous supply of moist and cool air (temperature modulation).

- Minimised dehydration & weight loss
- Up to 60% increase in product shelf life
- Top-freezing virtually eliminated
- Fuel savings of more than 20%

The electronic throttling valve delivers faster pull-down and superior performance in high ambient.

## 9 OptiSet™ Plus

Dramatically reduces the risk of operator error.

Pre-set operating parameters can be loaded by your dealer to match unit performance to the precise requirements of each load. Parameters include:

- Set point
- Temperature range
- Operating mode (Cycle-Sentry / Continuous run)
- Produce Protection Plus
- Discharge Air Control

## 10 Discharge Air Control

Safeguarding fresh produce by keeping discharge air temperatures close to set point, the selectable Discharge Air Control feature eliminates top freezing.

## 11 Heater bars

Provide 2000 watts additional heating capacity for units operating on electric stand-by in cold climates.

17

# SLX accessories

## ■ TemperatureWatch

Allows driver to monitor load temperature directly from the cab.

## ■ Fuel level display

High visibility LED display allows driver to monitor reefer fuel tank level from the cab.

## ■ Combo display

Allows driver to view unit status and alarms from the cab (operating mode, box temperature, fuel level).

## ■ SR-2 extension

Permits repositioning of SR-2 control panel close to the operator on high trailers and rail or intermodal applications.

## TrackKing

### ■ Your intelligent remote monitoring system

- Manage your refrigerated cargo
- Track your fleets
- Lower your operating costs

## ■ Fuel sensor

Communicates fuel tank content to SR-2 to notify operator before fuel runs out.

### AIA temperature sensor

High-accuracy roof-mounted sensor designed to withstand impact.

### Remote evaporator guard

To protect against accidental damage.

### SR-2 rear remote control

Allows control of the refrigeration unit from inside the rear of the trailer during loading.

### Slim-line door switch

Shuts down the unit when doors are open to reduce load temperature rise and save fuel.

### Polyethylene diesel fuel tank

- User-friendly and lightweight
- Easy and quick to fill from either side of the vehicle
- Impact- and corrosion-resistant
- Increased capacity (230 litres)
- Lockable filler caps

# Always insist on genuine Thermo King service parts

*Thermo King understands the importance of parts availability and performance. That's why we have expanded our range of aftermarket products. Now you can get the parts and accessories you need, where you need them, when you need them, quicker and more efficiently than ever before. Our goal is to provide you with the total solutions package to increase operating performance and reduce life cycle costs.*

## **Replacement parts**

Genuine Thermo King replacement parts are proven time after time in side-by-side testing to be superior to other non-original parts. Specifically engineered to provide optimal performance and maximum life, Thermo King replacement parts protect your investment and give you confidence and peace of mind on the road.

## **Maintenance parts**

Thermo King offers the highest quality in durable maintenance parts. All parts have been carefully selected and designed to keep your Thermo King equipment operating efficiently and at full capacity for longer and to reduce life cycle costs.

# ThermoKare Service Solutions

ThermoKare is a complete selection of service contract solutions, designed for fleets operating nationally or internationally. The contracts are designed to optimise the efficiency of your fleets, minimise operating costs and maximise the resale value of your equipment. Our tailored service contract solutions help to remove the non-core tasks from your daily business operations such as maintenance planning, scheduling, invoice interpretation and general fleet administration. The ThermoKare service contract solutions offer you everything from “administration only” to the complete “peace of mind” contract at an agreed, fixed cost.

**For more information about ThermoKare, please contact your Thermo King representative.**

## Thermo Assistance

Thermo Assistance is a multilingual 24-hour telephone breakdown assistance service available throughout Europe that puts you in direct contact with an authorised Service Dealer whenever you require one.

# Thermo King Dealer Service Network

## Anywhere in Europe

- Blanket coverage across Europe
- Open & available 24/7
- Over 300 authorised service points
- 1,300 certified technicians
